Last updated: January 12, 2024

Welcome and thanks for your interest in AddFlow for Script !

Description

This package is the installation package of AddFlow Script version, a general purpose Flowcharting/Diagramming component for JavaScript and TypeScript, which lets you quickly build flowchart-enabled applications. AddFlow Script is written in TypeScript and uses the basic <canvas> element.

AddFlow Script is the successor of AddFlow for HTML5. It is faster and it provides more features like labels or jumps. It is written in TypeScript and it can be used with Angular (a demo for Angular will be provided).
